SAVE Money and the Environment

AA4400X SIP – AA3300X SIP – Evolution 35 SIP the world's most advanced Coolers with SIP Ozone self-sanitisation with Sleep Mode

AA4400X SIP

Evolution35 SIP

AA3300X SIP

SAVING YOU MONEY

Activating Sleep Mode turns the power to the Cooler off during times of no use. Our tests have shown that - if asleep from 18.00 to 06.00 - the annual saving in electricity for a Hot & Cold Cooler is 912kwh, and for an Ambient & Cold Cooler the saving comes to 139kwh

REDUCING YOUR CARBON FOOTPRINT

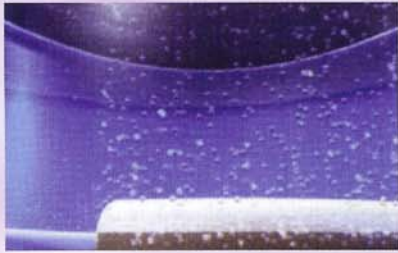

DEFRA calculate that every kwh is responsible for 530gms of Carbon. Using the sample above, the annual saving in Carbon output therefore amounts to a staggering 490 kg for a Hot & Cold and 74.5 kg for an Ambient & Cold Cooler

THE MOST HYGIENIC COOLER

SIP automatically sanitises 365 nights per year. You cannot get it any better. The AA3300X SIP, AA4400X SIP and Evolution 35 SIP. Available as POU or Bottled Coolers, as ambient & cold, hot & cold, floor standing or table top Coolers (except for table top hot & cold)

**The world's most advanced
coolers from AA First**

SIP AUTOMATIC COOLER SANITISATION

SIP sanitises by Circulating micro bubbles of chemical free Ozone into your coolers

Each night, SIP activates for approx 5 mins to sanitise your Cooler

Bio film, bacteria, viruses & mould can't survive ozone exposure

HOW THE SIP SLEEP MODE WORKS

SIP can be programmed to turn the power to the Cooler off and back on again, without affecting the overnight sanitisation cycle

SIP OZONE SANITISING COMPARED TO UV INLINE FILTERS

UV and Ozone have been effective and proven sanitising agents for a long time. However, Ozone can claim a number of significant advantages over UV.

The main advantages are

- SIP costs less to run, on for only 20 mins each day instead of 24/7 for UV
 - SIP is more effective, no shadowing for bugs to hide in
- SIP is more dependable because the ozone generation remains stable, unlike the UV light source which deteriorates with time.
